A. The Globin Natural Calibrator: Bernardi Compaction Law
(Invariant 3-Exon Coding Footprint, n=522 Genes)

B. Clade-Stratified Compaction Effect Sizes
(Severe Amniote & Teleost Compaction vs Uncoupled Urodeles/Sharks)

C. Subunit Polarity & Developmental Compaction
(Mammalian α-Compaction vs Avian/Squamate Compaction)

D. Universality Across 72 Vertebrate Baseline Genomes
(Empirical Demonstration of Genome-Wide Isochore Compaction)
